

## Time Is Big Mac

While performing identical tasks around the world, McDonald's employees hold very different living standards. The data suggest large differences in the **wage rates** received by workers doing the same work and using the same skills in the rich and poor countries.

A real wage rate is a **nominal wage** rate divided by the **price of a good** and is a transparent measure of how much of the good an hour of work buys. It is an important indicator of the living standards, and the productivity of workers.

The table below calculates the real wage rate, using the price of **Big-Macs** as the comparable price of a good, and the nominal **hourly wage** of **McDonald's employees**, in some of the fastest and slowest earning countries. We have chosen to present a country per continent.

This gap highlights the growth of wealthy countries and the stagnation of poor ones. Please mind this gap.

Country	Mc Employee Hourly Wage (USD)	BigMac price (USD)	BigMac's Per Hours	Hours for BigMac
Australia	13.4	3.9	3.435897436	0.2910447761
Italy	9.2	4.7	1.957446809	0.5108695652
USA	9.03	5.51	1.638838475	0.6101882614
Mexico	1	2.8	0.3571428571	2.8
South Africa	0.97	3.2	0.303125	3.298969072
India	0.66	2.37	0.2784810127	3.590909091
